MARIADB Runbook

## Short Descripton

This is a compilation of Ansible playbooks that creates a MARIADB Database.

Required Software

Ansible, CentOS7, Vagrant*

Architecture Diagram

Deployment

In the MARIADB Database runbook, run web.yml and db.yml on a CENTOS7 instance. *You may use Vagrant to deploy to multiple virtualized instances.

Issues

Title: *Service Process*
Description: *What should you do if the service process dies?*

Remediation Steps: *Run playbooks web.yml and db.yml again.*

Title: *DB.yml Error*
Description: *What is the fatal: [localhost]: FAILED! error?*
Remediation Steps: *On running the DB.yml playbook, you may ignore that error.*
